ACCESSORIES

MICROGARD® / MICROCHEM® Seam Technology

Microgard Limited use 5 main seam types for its range of protective clothing, depending on the fabric and the final application for which it will be used

Ultrasonically Welded & Taped Seams

A feature throughout the MICROCHEM® 4000 & 5000 range, this seam technology is our highest barrier to liquid and particulates.

Ultrasonically Welded Seams

Provides a strong liquid and particle barrier.

Stitched & Taped Seams

Internal stitching which is overlapped to offer increased strength and an effective barrier to liquids and particulates.

Bound Seams

An overlay of material similar to the base fabric is lock-stitched in place. This technology provides superior strength, liquid and particle barrier when compared to a traditional stitched seam.

Stitched Seams

Microgard Limited utilise 3-thread overlocking technology, which offers an excellent balance of a strong seam with good particle barrier. Internal stitching reduces the risk of any potential linting from the thread.
